# Buying Flow using Custom Product

In this guide, you will see how a seller can create a custom product and a buying flow w.r.t that product.
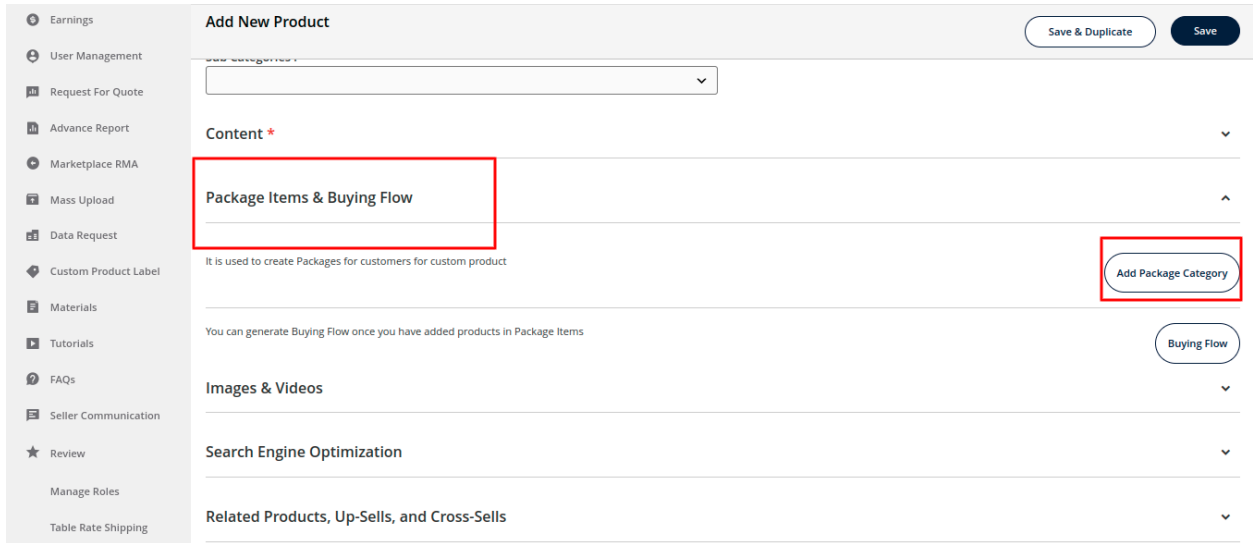

Buying Flow is a feature, where customers can select step-by-step products. Also, the seller can add different labels or images related to products.
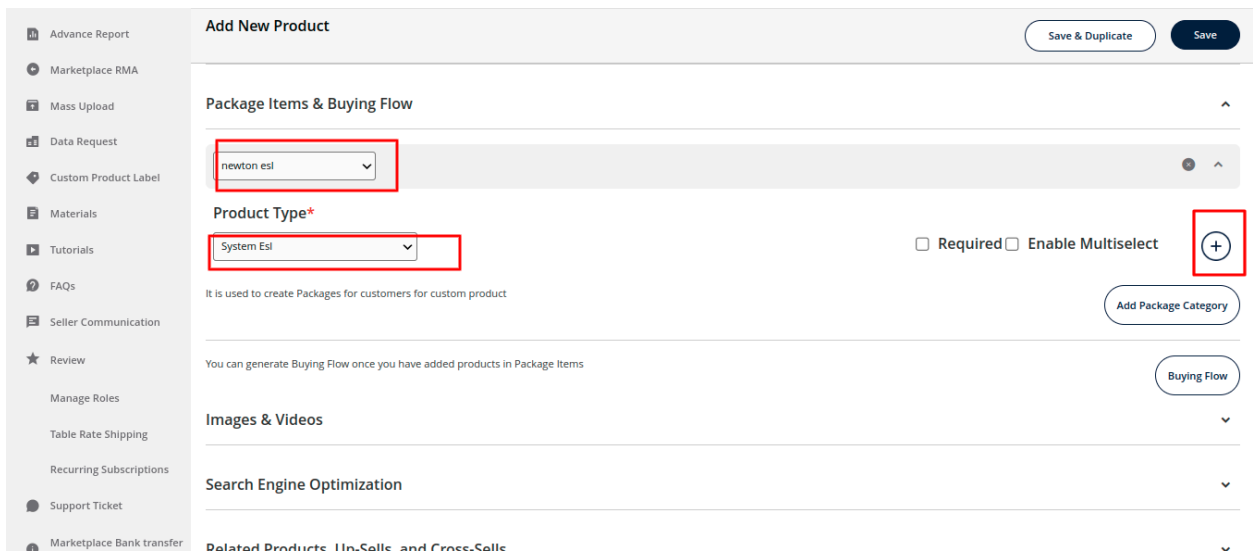

Seller Configuration

- Go to the vendor dashboard and select **Products** from the left navigation menu
- Click on **Add Products**

- Select the product type as **Custom Product** and click on the **Continue** button.
- Fill up the information as required
- Now, scroll down, and under the **Package Items & Buying Flow** section click on the **Add Package Category** button.
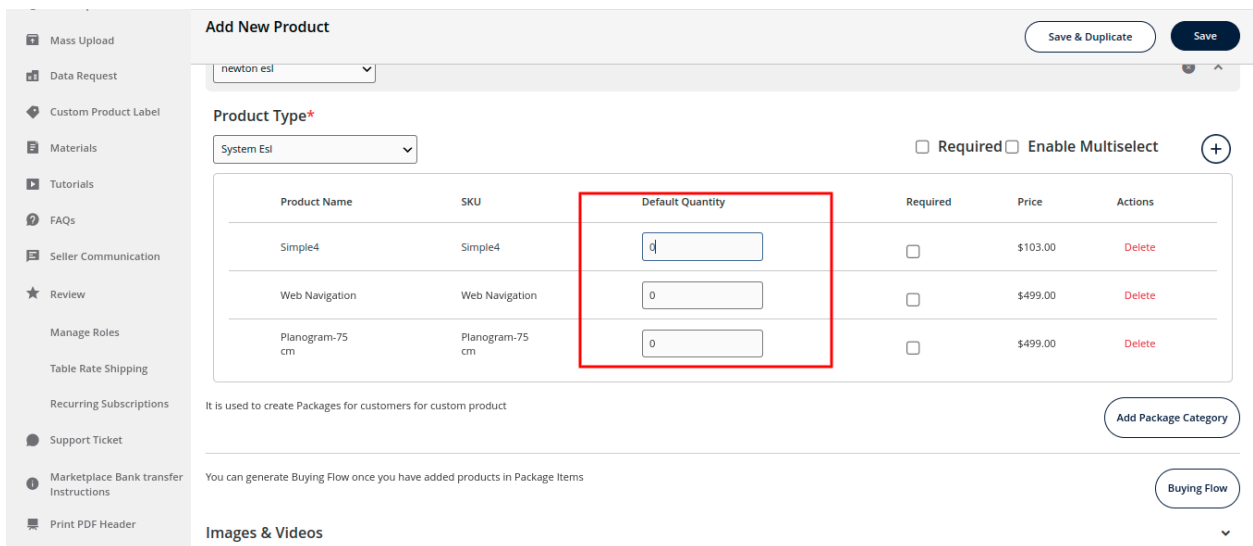

- Select the package category, and product type and click on the plus icon.

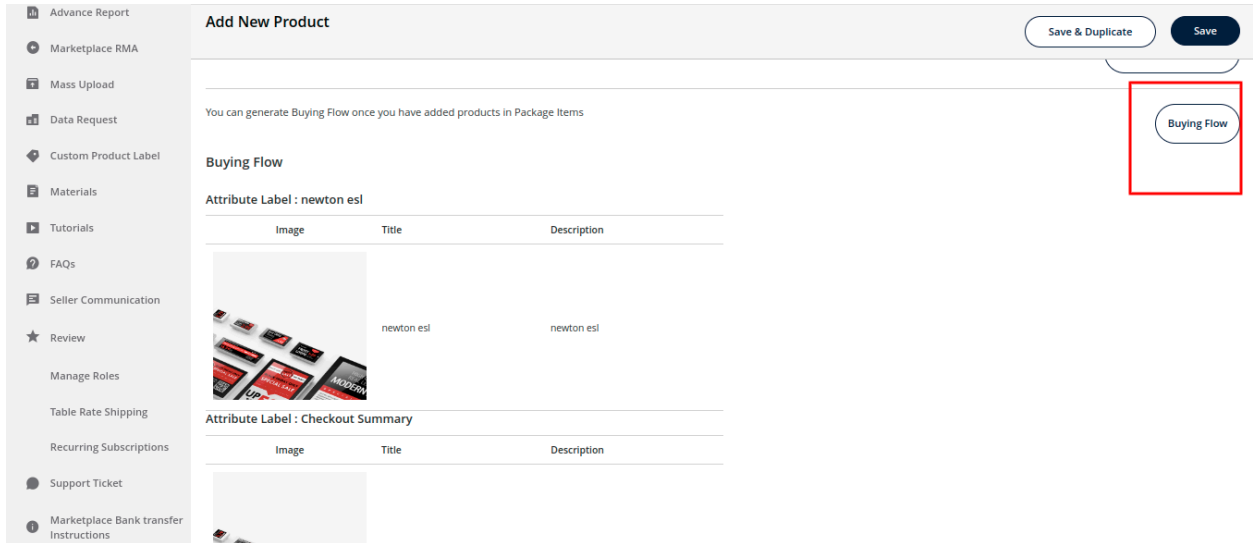

- Here, you can select products that you want to assign under particular package categories.
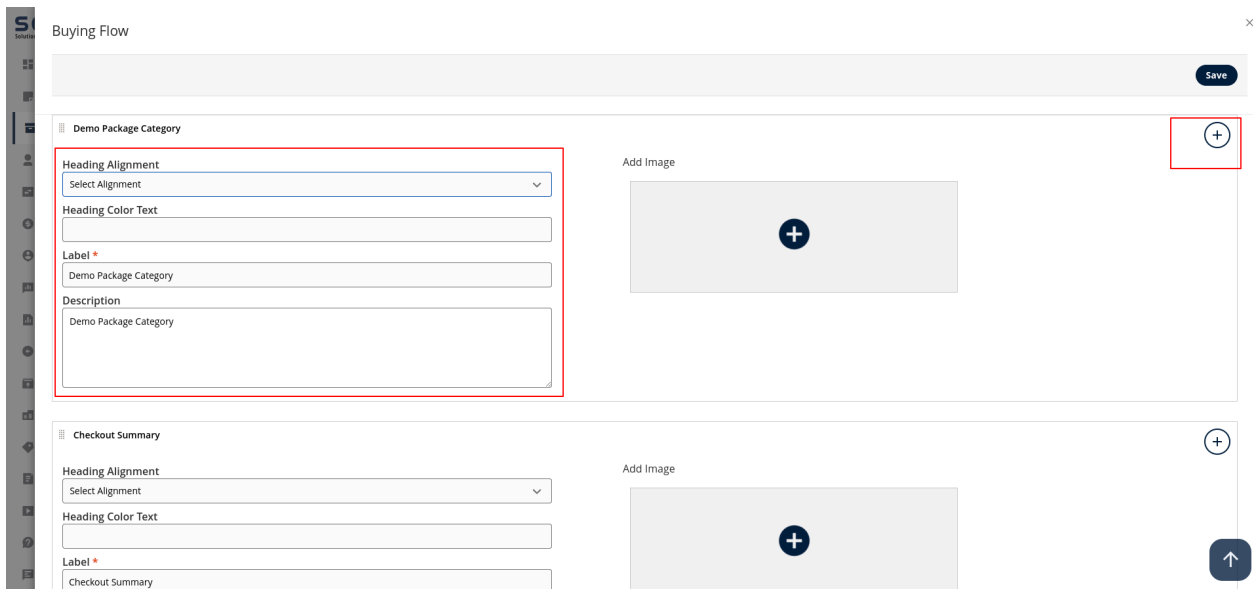

- Click on the **Save** button and you will the grid of the products

- Here, you can add the default quantities that you want to give.
- You can add as many as package categories you want to add.

- Now. click on the **Buying Flow** button to create a buy-now process

- Here, you can add:
  - Heading Alignment: Where you want to set the heading,
  - Hedging Text Color: Personalise color code,
  - Label,
  - Description.
  - Images
- Also, you can create as many as slider you want to create by clicking on the plus icon.

- Click on the save button and your buy-now process will be completed.

To know, How to create package categories on the admin end, please find the below doc.
